

WAREHOUSE PROTECTION THAT DELIVERS THE GOODS

When it comes to storage facilities, fire safety is no easy task. In large open spaces with high airflow, smoke is quickly diluted, making it impossible for traditional detectors to provide early alarms. And because of the compact, vertical nature of racking, fires in warehouses can spread fast, leaving little time for response. This is where advanced detectors and voice alarms provide early warning and become indispensable for a safe and efficient warehouse evacuation.

THE FIRST TO KNOW IS THE FIRST TO ACT

At Honeywell, we've been developing tailor-made fire safety and security systems for decades. We know just how vital early warnings are to a warehouse's security. Our solutions are designed to serve the specific safety needs of warehouses of all sizes. We can increase your facility's safety and productivity with a wide range of progressive fire alarm and voice alarm systems, and security technologies.

FIRE SOLUTIONS

Fire Alarm Systems

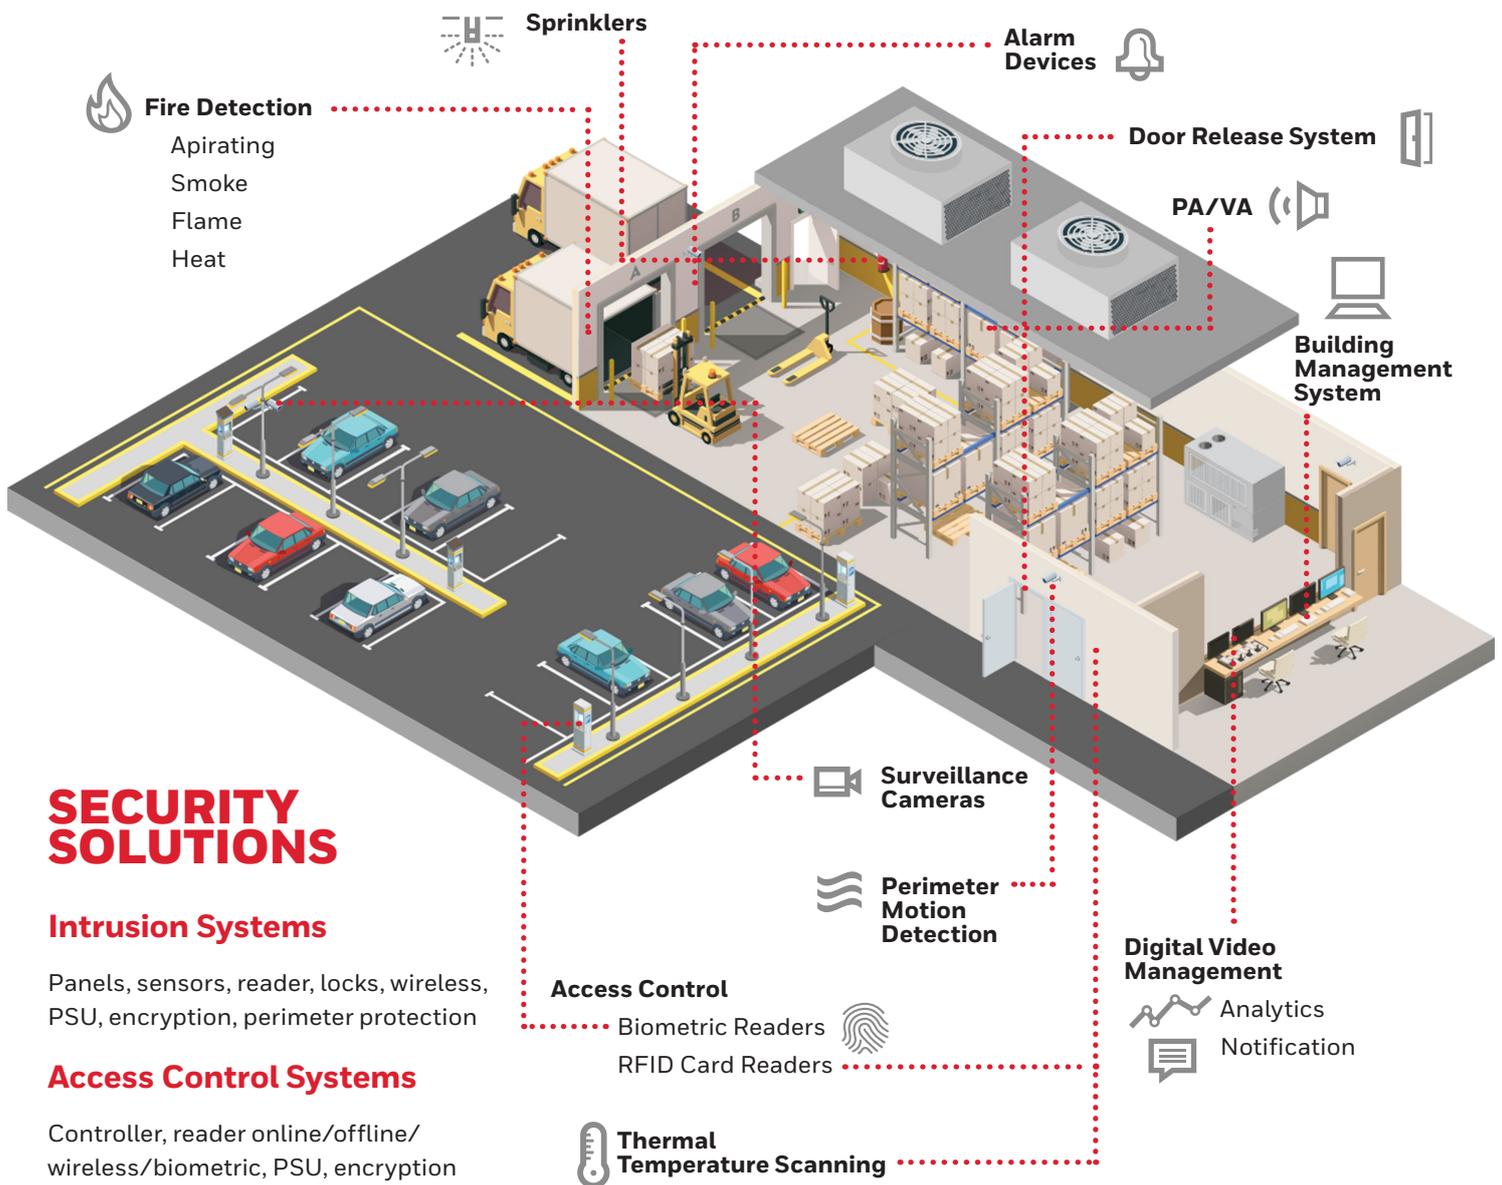

Panels, power supplies, detectors, manual call points, alarm devices, transponders, wireless components

Connected Life Safety Services (CLSS)

Cloud solutions, mobile App, maintenance, reporting, status, Gateway

Public Address / Voice Alarm Systems (PA/VA)

Controllers, amplifiers, racks, call stations, music players, loudspeakers, redundant power supplies and cabling, simulations of speech intelligibility

SECURITY SOLUTIONS

Intrusion Systems

Panels, sensors, reader, locks, wireless, PSU, encryption, perimeter protection

Access Control Systems

Controller, reader online/offline/ wireless/biometric, PSU, encryption

Video Surveillance Systems

Recorder, cameras, management system, analytics/AI, perimeter protection

PSIM

Physical Security Information Management

Data Privacy

GDPR, encryption, cybersecurity

PROTECT YOUR PEOPLE AND YOUR GOODS

We prioritize efficient warehouse operations and provide you with durable, ergonomic equipment that meets your specific site needs. When you have the right set of tools working for you, protecting and leading people back to safety becomes an easier task. You can't predict incidents, but you can leverage the power of voice, evacuation, and video solutions to be the first to react.

YOUR KEY TO RELIABLE FIRE DETECTION

VESDA VLI

Dedicated to dirty manufacturing halls and warehouses, VLI (VESDA Laser Industrial) aspiration smoke detector is equipped with multiple, specialized high-volume filters that protect the detection chamber and aspirator.

VESDA VEP AND VEU

Featuring a 3.5" display, both use the most advanced aspiration detection technology for very early warning, and the best nuisance alarm rejection for a wide range of applications. Both offerings are an excellent fit for high-bay storage and high warehouses.

ADVANTAGES

- Very early warning to initiate investigation
- Multiple levels of alarm, to initiate responses/scenarios appropriate to the level of risk
- Position the pipe network and sampling points where smoke will travel
- Position the detector for easy maintenance
- All commissioning and troubleshooting can be made from one point
- Pipe layouts can be precisely calculated

FAAST LT-200 EB

Designed to work in harsh, demanding environments where maintenance is difficult or where other smoke detection methods aren't practical, FAAST can also serve smaller mission-critical aspiration smoke applications where very early warning is crucial. For a wide variety of Class C applications. Preconfigured Esserbus transponder included.

OPEN AREA SMOKE IMAGING DETECTION

Digital imaging, dual-frequency beams, and smart algorithms allow OSID systems to be configured to protect a range of spaces of any shape. By using IR and UV light to detect particles, the system can distinguish them by size, increasing noise immunity and lowering the number of false alarms. OSID provides a low-cost, reliable, and easy-to-install solution for your facility.

HONEYWELL IS THERE. IN WAREHOUSES THROUGHOUT THE REGION AND AROUND THE WORLD.

THE GLOBAL STANDARD FOR WAREHOUSE SAFETY

- Customizable and proven detection and evacuation solutions
- High standards of reliability and safety worldwide
- Complete backward compatibility with existing systems
- Low maintenance costs and long service life
- Wide range of products for critical environments
- Evacuation also supported by voice messages, in compliance with regulations
